Hi Ca. and D.,

We are in the process of reviewing the new submission and figures and have a few questions. The reason I asked for a new submission is that the text had changed significantly from the 1st submission. However, for the figures I thought that only Figure 16 had changed. What we see in the new submission is that all figures have been submitted as they were <u>before</u> ISO/CS prepared them and therefore the accompanying text (figure keys in the Word file etc) is also affected.
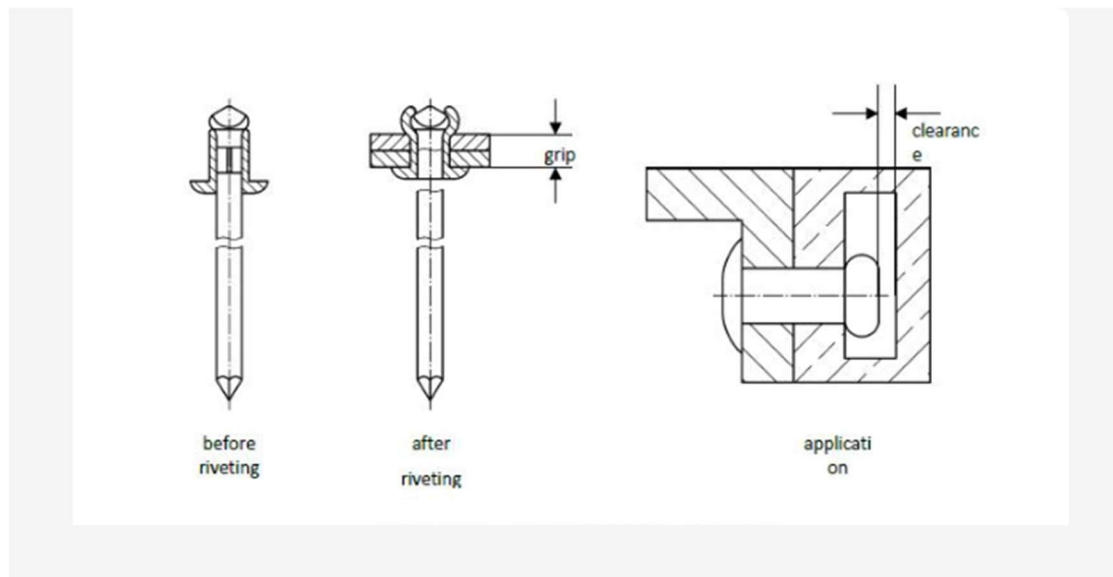

Here is an example:

Figure 10 as prepared by ISO after the 1st submission (all text is in the Word file):

a	Grip.
b	Clearance.
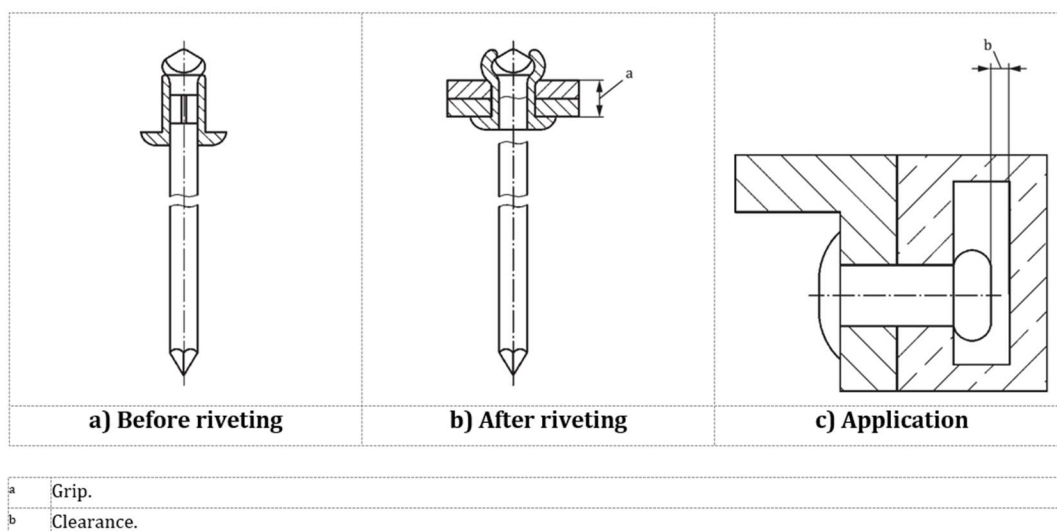

Figure 10 — Blind rivet — Key attributes

In the **new submission**: The figure is not correct per ISO rules and the figure key is missing in the Word file.

What I need from you:
- the new text with your corrections, <u>using the track changes file that I sent you in June in the attached email</u> (this includes the figure keys that were prepared based on the ISO treatment/correction of the figures as in Figure 10)
- confirmation that Figure 16 is the only new figure.

Please let me know if you need clarification or if we need a quick phone call to resolve this.

Thanks,

Cl.
